

Employee Laptop Request Management System

Brainstorming – Idea Generation – Prioritization Template

Date | 06-09-2026

Project Name | Employee-Laptop-Request-Management-System

Maximum Marks | 4 Marks

1. Brainstorming

The brainstorming phase focused on identifying common challenges faced by employees and IT teams in managing laptop requests. The main issues identified were **manual request submission, duplicate requests, delays in approval, lack of request tracking, unclear request justification, and limited visibility for IT and management teams.**

The brainstorming process aimed to identify a centralized and automated solution that could simplify laptop request submission, enforce business rules, automate approvals, and improve request tracking.

2. Idea Generation

	Idea	Description
1	Automated Laptop Request Management Self-Service	Manage the complete lifecycle of employee laptop requests using ServiceNow.
2	Laptop Request Portal	Allow employees to submit laptop requests through a centralized Service Portal using a Record Producer.
3	Request Type Classification	Allow employees to select Basic or Advance laptop requirements based on their usage.
4	Duplicate Request Prevention	Prevent an employee from submitting more than one laptop request within a year.
5	Automated Approval Workflow	Automatically route submitted laptop requests for manager approval and track the approval status.

6	Email Notifications	Notify employees and relevant stakeholders about request submission and approval status.
7	Request Tracking & Visibility	Provide employees, IT teams, and management with better visibility into request status and accountability.
8	Role-Based Security	Use ACLs and appropriate access controls to ensure that users can access only the information they are authorized to view or modify.

3. Idea Prioritization

The ideas were prioritized based on **business value, feasibility, automation potential, user convenience, security, and implementation effort.**

Idea	Business Value	Feasibility	Priority
Automated Laptop Request Management	High	High	1 – Highest
Self-Service Laptop Request Portal	High	High	2
Duplicate Request Prevention	High	High	3
Automated Approval Workflow	High	High	4
Request Type Classification	High	High	5
Request Tracking & Visibility	Medium	High	6
Email Notifications	Medium	High	7
Role-Based Security	High	Medium	8

4. Selected Idea

Automated Employee Laptop Request Management System in ServiceNow was selected as the final idea because it provides a **centralized, controlled, and automated approach** to managing employee laptop requests.

The selected solution combines **self-service request submission, Basic/Advance request classification, duplicate request prevention, manager approval workflow, status tracking, email notifications, and role-based access control** into a single ServiceNow application.

This solution helps replace manual processes such as **emails and verbal requests** with a standardized digital workflow, improving **efficiency, visibility, accountability, and request management.**
