

User Acceptance Testing (UAT)

1. Objective

The objective of User Acceptance Testing is to verify that the **Employee Laptop Request Management System** meets the required business needs and works correctly for employees, managers, and IT teams.

2. UAT Test Cases

S. No.	Test Scenario	Expected Result	Status
1	Employee submits a laptop request	Request is created successfully	Pass
2	Employee selects Basic request type	Basic request is recorded	Pass
3	Employee selects Advance request type	Advance request is recorded	Pass
4	Employee submits a duplicate request within the same year	Request is blocked with an error message	Pass
5	New request is created	Status is set to Pending Approval	Pass
6	Manager receives approval request	Manager can approve or reject the request	Pass
7	Manager approves request	Status changes to Approved	Pass
8	Manager rejects request	Status changes to Rejected	Pass
9	Employee receives approval result	Email notification is received	Pass
10	Employee views own request	Request details and status are visible	Pass
11	Manager views requests	Manager can view requests	Pass
12	Manager tries to create or modify a request	Access is blocked	Pass
13	Employee creates/updates request	Access is allowed based on role	Pass
14	Update Set is previewed	Configurations are captured without unresolved conflicts	Pass

3. Acceptance Criteria

The solution is accepted when:

- Employees can successfully submit laptop requests.
- Duplicate yearly requests are prevented.
- Manager approval works correctly.
- Request status updates automatically.
- Email notifications are sent correctly.
- Role-based access works as expected.
- All major configurations are successfully captured in the Update Set.

4. UAT Conclusion

The User Acceptance Testing confirms that the **Employee Laptop Request Management System** satisfies the defined business and functional requirements. The system is ready for deployment and final handover.
