

Problem – Solution Fit Template

1. Problem

The existing laptop request process depends on **emails and verbal communication**, which can lead to duplicate requests, approval delays, poor tracking, and lack of centralized information.

2. Target Users

User	Need
Employee	Submit and track laptop requests easily
Manager	Approve or reject requests
IT Team	Manage and monitor requests
Management	View request information and status

3. Proposed Solution

A **ServiceNow-based Employee Laptop Request Management System** that provides a centralized and automated process for submitting, approving, and tracking laptop requests.

4. Problem–Solution Fit

Problem	Solution
Manual request process	Service Portal and Record Producer
Duplicate requests	Business Rule to allow one request per year
Approval delays	Automated Flow Designer approval
Poor request tracking	Request status tracking
Lack of notifications	Automated email notifications
Unauthorized access	Roles, Groups, and ACLs

Lack of
standardization

Structured laptop request form

5. Expected Benefits

- Faster request processing
- Reduced manual work
- Prevention of duplicate requests
- Easy approval management
- Better request visibility
- Secure role-based access

6. Conclusion

The proposed solution directly addresses the identified problems by providing a **centralized, secure, and automated laptop request management process in ServiceNow.**
