

Proposed Solution

The proposed solution is to develop a **centralized Employee Laptop Request Management System using ServiceNow**.

The system will allow employees to submit laptop requests through a **Service Portal Record Producer**. It will automatically validate requests, prevent duplicate requests, and send the request to the employee's manager for approval.

Key Features

- Self-service laptop request submission
- Basic / Advance request selection
- Automatic duplicate request prevention
- Manager approval and rejection
- Automatic status updates
- Email notifications
- Role-based access using Roles, Groups, and ACLs
- Request tracking and visibility
- Update Set-based deployment

Expected Outcome

The solution will replace manual email and verbal processes with a **secure, standardized, and automated workflow**, reducing manual effort and improving request tracking and approval efficiency.
