

Solution Architecture

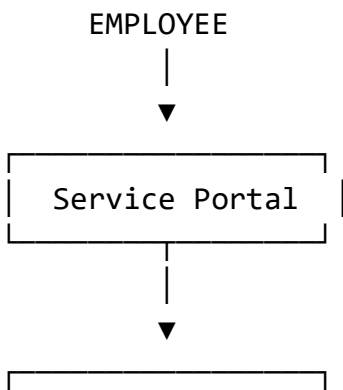

1. Architecture Overview

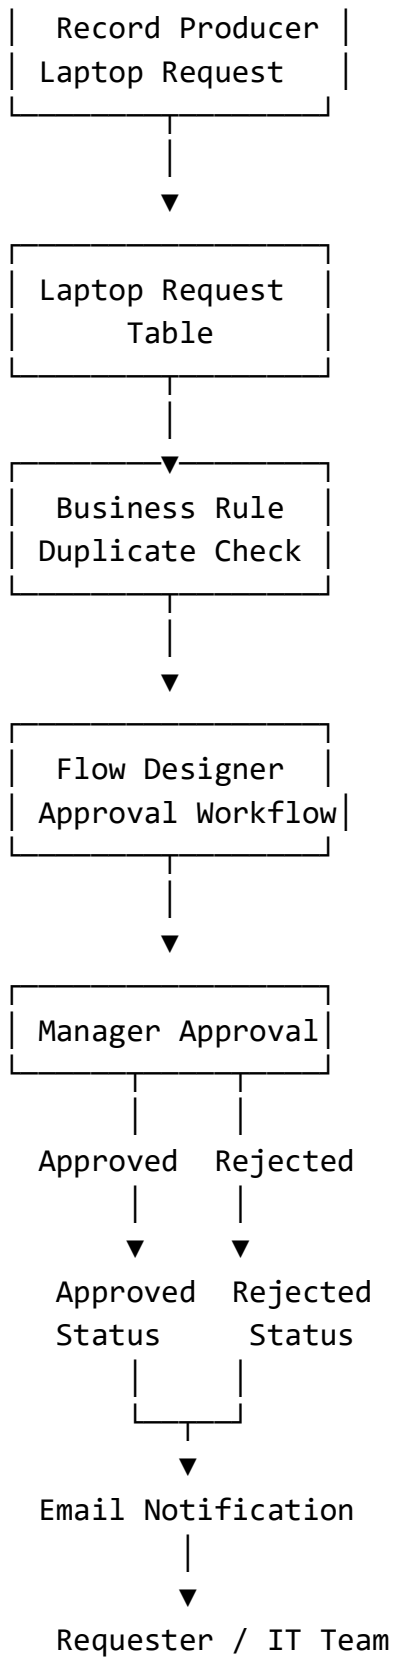

The Employee Laptop Request Management System is built using **ServiceNow**. It provides a centralized flow from employee request submission to manager approval and final status update.

2. Architecture Components

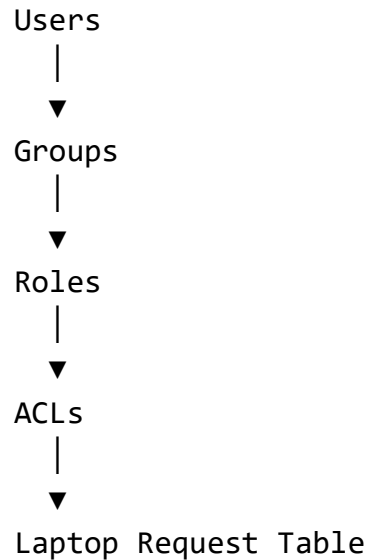

Component	Purpose
Service Portal	Provides the user interface for employees
Record Producer	Captures and submits laptop request details
Laptop Request Form	Stores employee laptop request information
Business Rule	Prevents duplicate requests within a year
Flow Designer	Automates approval and status updates
Approval Table	Stores manager approval information
Email Notifications	Notifies employees and managers
Roles & Groups	Defines user permissions
ACLs	Controls access to laptop request records
Update Set	Captures and deploys application configurations

3. Solution Architecture Flow

4. Security Architecture

- **IT Employees:** Create, read, and update requests.
- **IT Managers:** View requests and handle approvals.
- **ACLs:** Restrict unauthorized access.

5. Architecture Outcome

The architecture provides a **centralized, secure, and automated solution** for managing employee laptop requests from submission to approval and status tracking.
