

Planning Logic

1. Objective

The planning logic defines the sequence of actions required to process an employee laptop request from **submission to final approval status**.

2. Process Logic

Step	Action	System Behavior
1	Submit Request	Employee submits the laptop request through the Service Portal.
2	Validate Request	System checks the request details and duplicate requests.
3	Duplicate Check	If a request already exists for the employee in the same year, the new request is blocked.
4	Set Status	Valid requests are set to Pending Approval .
5	Manager Approval	Flow Designer sends the request to the employee's manager.
6	Approval Decision	Manager approves or rejects the request.
7	Update Status	System changes the status to Approved or Rejected .
8	Notification	Email notification is sent to the requester.
9	Track Request	Employee and IT team can view the request status based on their roles.

3. Planning Flow

Employee
↓
Submit Laptop Request
↓
Validate Request
↓
Duplicate Check

4. Security Logic

- Employees can create and manage their requests.
- Managers have view and approval access.
- ACLs control access to records.
- Roles and groups are used to manage permissions.

5. Expected Result

The planning logic ensures that every laptop request follows a **standardized, secure, and automated process** with proper validation, approval, notification, and tracking.
