

Performance Testing

1. Objective

The objective of performance testing is to verify that the **Employee Laptop Request Management System** performs reliably and responds properly during normal request processing.

2. Performance Test Cases

S. No.	Test Scenario	Expected Result	Status
1	Submit a laptop request	Request is created without delay	Pass
2	Submit multiple requests	System processes requests correctly	Pass
3	Duplicate request validation	Duplicate request is blocked quickly	Pass
4	Trigger approval workflow	Approval flow starts successfully	Pass
5	Manager approves/rejects request	Status updates correctly	Pass
6	Send email notification	Notification is triggered successfully	Pass
7	View request records	Records load correctly	Pass
8	Access request based on role	Access is provided or restricted correctly	Pass

3. Performance Areas Tested

- Request submission
- Business Rule execution
- Flow Designer execution
- Approval processing
- Email notification
- Record retrieval
- Role and ACL validation

4. Expected Result

The system should process laptop requests **smoothly and consistently**, without unnecessary delays during submission, validation, approval, notification, and request tracking.

5. Conclusion

Performance testing confirms that the Employee Laptop Request Management System provides **stable and reliable performance** for its expected business operations.
